# AGENDA

- Overview of “water in schools” requirements
- Strategies to improve students’ drinking water consumption in schools
- Examples from Maricopa County and Turlock
- Q & A

# ChangeLab Solutions

# ChangeLab Solutions

**Healthy, Hunger-Free  
Kids Act of 2010**

# Healthy, Hunger-Free Kids Act of 2010

- Improves nutritional quality of school meals
- Establishes national nutrition standards for all food sold in schools
- Requires that schools make **free drinking water** available **where meals are served during meal times**

# Healthy, Hunger-Free Kids Act of 2010

- Sets minimum standards
- States, districts, and schools can go above and beyond

# Healthy, Hunger-Free Kids Act of 2010

*Wellness Policies*

# *Water in Wellness Policies*

# Poll:

*Does the school or district with which you work have a wellness policy?*

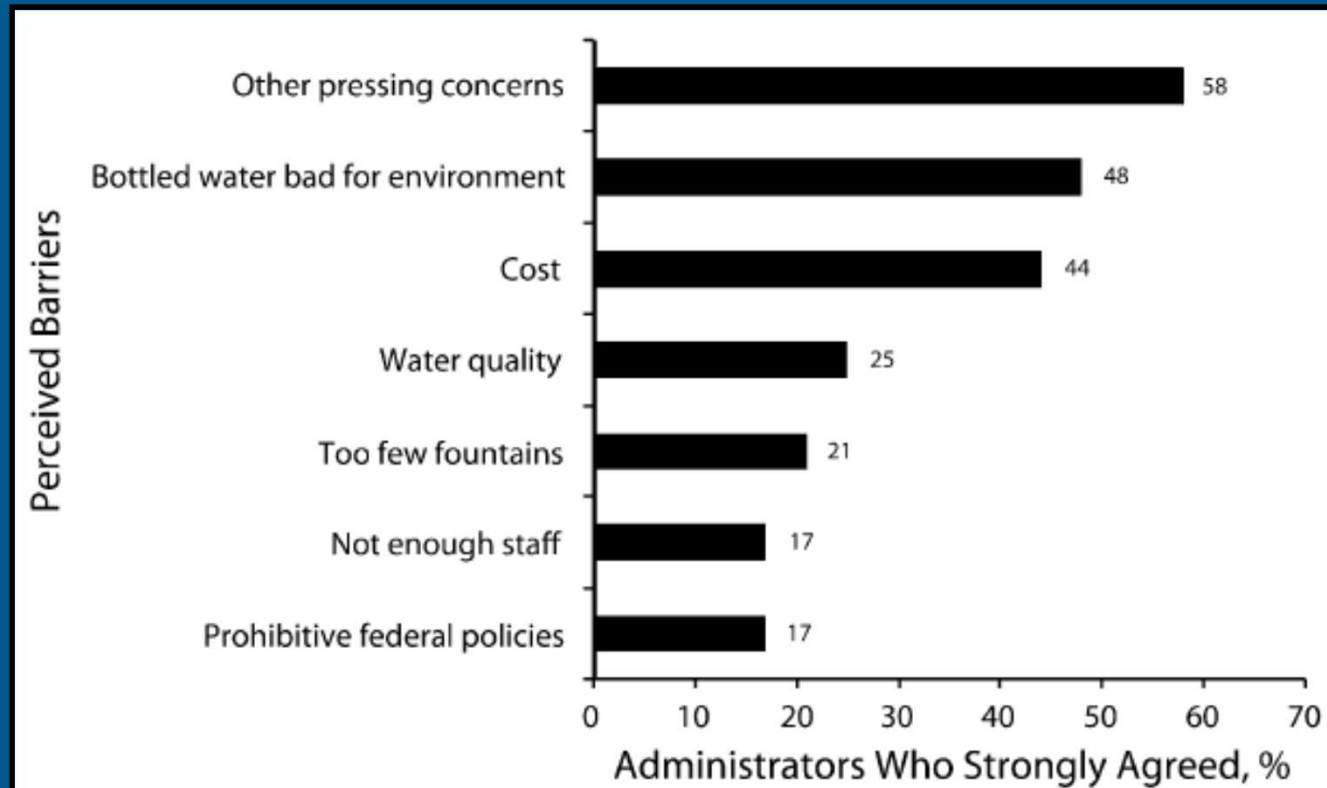

# Poll:

*If your school has a wellness policy, does it address water?*

**Perceived Barriers**  
to Improving  
Water Access

# ChangeLab Solutions

**CDC recommendation:**  
Conduct school drinking  
water needs assessment

## Appendix 1: School Drinking Water Needs Assessment Checklist and Planning Guide

The **School Drinking Water Needs Assessment Checklist and Planning Guide** is designed to help schools identify strengths, areas for improvement, and priority actions, and to develop measurable goals and objectives for improving access to and consumption of drinking water.

Respond to each question in the School Drinking Water Needs Assessment Checklist. In the notes section of the checklist, capture additional details or clarifying comments. For example, if your school district is working on developing a local school wellness policy that would incorporate language on student access to water fountains or filling stations throughout the school day, you might make note of the steps being taken to achieve that, or the barriers that make it difficult to achieve. Those notes will help guide you in developing your goals and objectives.

After completing the School Drinking Water Needs Assessment Checklist, **two planning questions** are provided to help guide further action to promote drinking water access within your school.

School Drinking Water Needs Assessment Checklist	Response options		Notes
	Yes	No	
<b>Step 1: Assess state, district, and school policies and practices related to water access.</b>			
<b>Food Service Areas</b>			
a. Does the school provide students with access to drinking water during the meal periods, as required by USDA?			
b. Is there a state requirement that students have access to drinking water during meals and snacks?			
c. Is there a district policy requiring water to be provided during meals and snacks (e.g., Local School Wellness Policy)?			
d. Does the district or school have Standard Operating Procedures (SOPs) for placement, filling, and cleaning of bulk bottled water dispensers in the cafeteria?			
<b>Other Areas in the School</b>			
e. What are the state or local plumbing codes and requirements for the number of water access points? What is the fountains-to-students ratio in your school? Does it meet the plumbing code requirements?			
f. Are there state or local sanitary codes for cleaning and maintaining drinking fountains, water containers, hydration stations, and other methods for delivering drinking water?			
g. Does the school district have policies related to drinking water access? Policies may address providing students with access to water fountains or water filling stations throughout the school, allowing students to bring fillable water containers to class, allowing students to get up to get a drink of water during class, providing cups at water access points, and marketing or promoting drinking water during the school day or at school-sponsored events and activities.			
<b>Step 2: Review states and local water testing requirements and recommendations.</b>			
a. Does your school meet the definition of a public water system and, therefore, comply with the Safe Drinking Water Act (SDWA)?			
b. If so, does it meet all federal and state standards under the SDWA?			

# ChangeLab Solutions

**Strategies for Success**

# Location, Location, Location

# Adequate Number of Water Sources

# Proper Maintenance and Upkeep

# Proper Maintenance and Upkeep

# Poll:

*What percentage of U.S. high school drinking fountains are perceived as “very clean”?*

# Answer:

*Between 25% - 50%*

## Other Strategies

- Refrigerated fountains/dispensers for plumbed drinking water

## Other Strategies

- Refrigerated, filtered water in coolers or portable dispensers.

## Other Strategies

- ✓ Providing reusable water bottles and encouraging students to bring to school
- ✓ Allowing students to use in classrooms
- ✓ Encouraging staff to drink water in classrooms

## Other Strategies

- ✓ Providing cups near all fountains/dispensers and at tables

# National School Lunch Program Facts

Almost **32 million** kids eat school lunch  
each school day

**11 Million** eat school breakfast each school  
day

On average, after labor and expenses,  
schools have just over **\$1 per lunch** to  
spend on the entire meal including milk

Since the modern program began, over **219  
BILLION** lunches have been served

## **HEALTHY HUNGER FREE KIDS ACT**

In 2010, congress passed the Healthy Hunger Free Kids Act to provide students with healthier and more nutritious food options

The USDA directed nutrition standards for **all** food and beverages sold to students

The federal reimbursement rate for school lunches increased by **ONLY 6 cents**

## **THE HEALTHY, HUNGER-FREE KIDS ACT OF 2010 WATER AVAILABILITY:**

Schools participating in the **National School Lunch Program (NSLP)** are required to make free water available to students during meal times where they are served

Schools participating in the **School Breakfast Program (SBP)** are required to make drinking water available when breakfast is served in the cafeteria.

## **WATER AVAILABILITY DURING MEAL SERVICE**

Water **must** be available without restriction in the location where meals are served

**No separate funding** available for this provision and reimbursement may not be claimed

Implementation by the beginning of **School Year 2011-12**

# MEETING THE REQUIREMENTS

# Other Options

# New York City Health Department

**Cathy Nonas, MS, RD** NYC Health  
Department Mayor's Obesity Taskforce

Research showed students drank **3 times** more  
water after water jet dispensers were  
installed compared to control groups

NYC has water jets in more than **300** city  
school cafeterias.

Plans of adding more than **700** new water jets  
in schools

# Arizona Nutrition Network SNAP-Ed

Justification sent to USDA for use in  
**7** partnering SNAP-Ed schools

Submitted supporting research from  
**NYC, CDC, NIH and Harvard**

Received approval from **USDA and  
ADHS**

# IMPLEMENTATION OF WATER JETS

## Education component to program:

Kick off Event

Reusable water bottles with nutrition  
messages

Water pledge posters to display in cafeteria

Banner for cafeteria

PA announcements for students

Signs for cafeteria to bring water bottles

## Drinking Water Access in Schools

*By increasing access to free drinking water, schools can help promote children's readiness to learn, and their overall health. This fact sheet offers strategies for schools to make drinking water more readily available, including ways for parents and community members to get involved.*

The drinking fountains of our youth are all but relics of the past: at many schools today, sugary beverages are far easier to come by than safe, free drinking water. Inadequate water consumption can have negative consequences on children's overall health and their ability to learn. Children who are dehydrated tend to experience a drop in their cognitive performance, particularly short-term memory and concentration.<sup>1</sup>

Making matters worse, instead of drinking water, children tend to drink beverages that can contribute to excess weight gain and tooth decay, such as sodas, sports drinks, and sweetened teas.<sup>2-4</sup> About a third of children and adolescents in the United States are overweight or obese, and studies link rising obesity rates to the consumption of soda and other sugar-sweetened beverages.<sup>5</sup>

## Policy Brief: Fulfilling the Promise of Free Water in K-12 Schools

### Background

Overweight and obesity among children and adolescents have tripled in the past three decades.<sup>1</sup> With one-third of our nation's 2-19 year-olds now overweight or obese,<sup>2</sup> the consequences are alarming for their health and longevity, as well as for the nation's economic well-being. A growing body of research implicates sugar-sweetened beverages (SSBs), such as sodas and sports drinks, as a key driver of rising obesity rates.<sup>3,4</sup> In the U.S., 80 percent of 2-19 year-olds consume at least one SSB daily.<sup>5</sup>

Free drinking water provides a healthy, low-cost, zero-calorie beverage option. Consumption of water is associated with a number of health benefits including obesity prevention,<sup>6-10</sup> dental caries reduction (even in the absence of fluoridation, drinking water instead of SSBs can prevent caries),<sup>11,12</sup> proper hydration, and improved cognitive function.<sup>13,14</sup> Access to free, clean drinking water in schools is important since children spend substantial time there and students may arrive at school already dehydrated.<sup>15</sup>

In September 2010, California enacted SB 1413, which requires schools to provide access to free drinking water during meal times in school food service areas.<sup>17</sup> In December 2010, President Obama signed the Healthy, Hunger-Free Kids Act of 2010, which included a similar provision.<sup>18</sup> Both statutes were effective as of the 2011-2012 school year.<sup>19</sup>

### The Study

From May to November of 2011, researchers at the University of California, San Francisco, in conjunction with California Food Policy Advocates and ChangeLab Solutions (formerly Public Health Law & Policy), examined drinking water access, water-related policies, and practices, as well as barriers to improving water access and intake in California public schools.<sup>20</sup> The study principally consisted of interviews with administrators from 240 randomly selected California schools, and helped to document water access in California's schools as the law was being initially implemented. In addition, a stakeholder convening was held in March 2012, where policy and research recommendations were developed, based upon the study's findings.

Water Access in Schools

Providing students with access to safe, free drinking water throughout the school day is one strategy schools can use to create an environment that supports health and learning.

Benefits of Drinking Water

Providing access to drinking water gives students a healthy alternative to sugar-sweetened beverages. It helps to increase students' overall water consumption, maintain hydration, and reduce energy intake if substituted for sugar-sweetened beverages.<sup>1-3</sup> Adequate hydration also may improve cognitive function in children and adolescents.<sup>4-8</sup> Drinking water, if fluoridated, also plays a role in preventing [dental caries \(cavities\)](#).

Access to Drinking Water

The [Healthy, Hunger-Free Kids Act of 2010](#) and the new "Smart Snacks in Schools" nutrition standards requires schools participating in the [National School Lunch Program \(NSLP\)](#) to make free water available to students during meal times where they are served. The standards also require schools in the [School Breakfast Program \(SBP\)](#) to make drinking water available when breakfast is served in the cafeteria.

In addition to the requirements, schools should use a variety of strategies, including—

- Ensuring that water fountains are clean and properly maintained
- Providing access to water fountains, dispensers, and hydration stations throughout the school
- Allowing students to have water bottles in class or to go to the water fountain if they need to drink water

**U.S. Environmental Protection Agency (EPA)** standards and regulations assure that tap water is clean and safe. In rare cases when tap water may not be safe to drink, schools should provide drinking water to students in other ways, including installing filtration systems or purchasing drinking water.

How to Make It Happen at Your School?

### Thirsty?

Learn more about recent steps to promote water consumption in schools.

*In December 2010, President Obama signed the Healthy, Hunger-Free Kids Act into law. This act improves child nutrition policy in many important ways, including a provision to require free drinking water to be available with school meals. In September 2010, Governor Schwarzenegger signed SB 1413 (Leno) creating a similar requirement for all schools in California to make free, fresh drinking water available to students during school meals. These new requirements recognize that some progress has been made in getting rid of sugary drinks in schools. But, not as much has been done on promoting the healthy choices, namely water. Water is an essential nutrient and is calorie-free. Best of all, tap water is free! Unfortunately, a recent survey in California found that over 40 percent of responding schools reported to have no access to free water in cafeterias.*

*The [state](#) and [federal](#) governments recently released guidance on implementing these requirements; schools should be in compliance by the 2011-2 academic year. This web-based toolkit provides you with the information you need to promote water consumption in schools.*

*A report by California Food Policy Advocates highlights challenges with providing free, clean, and appealing tap water in schools as well as strategies to promote consumption. Click [here](#) for a copy of the report. Use the links above to learn about*

Community Water Center

## Community Water Center's Guide to buying a water filter

Home water filters may be one of the most cost-effective ways to improve the quality of your tap water. However, it is important to be informed about your filter choices, and take the necessary steps to understand what your water quality concerns are. CWC has outlined some important information about water filters, questions to consider before buying, and the steps to securing the right water filter for your home.

### Common myths about water filters

Water Filter Myth	Water Filter Reality
Any water filter can take contaminants out of water.	Not all water filters are able to filter out all contaminants. In order to get the proper filter to address your water quality concerns, you must know what contaminants are in your water. Just because a water filter is expensive does not necessarily mean it will make your water safe.
All marketed water filters are proven to take out the contaminants they claim too.	Only filters that are certified by California Department of Public Health (DPH) have been tested to ensure that the filter actually does what it claims to do. DPH publishes a list of filters that have been tested in an independent laboratory to ensure the filter meets the health-related performance claims and ensure that the filter doesn't add any other contaminants to your water.
Water softeners filter my water.	Water softeners do not improve your water quality. Water softeners devices are only good if you are trying to soften your water.

A full list of approved treatment devices is available for each contaminant at <http://www.cdph.ca.gov/certlic/device/Pages/watertreatmentdevices.aspx> or by calling the California Department of Public Health (DPH) at (916) 449-5600.

# USDA NON-DISCRIMINATION STATEMENT

The U.S. Department of Agriculture prohibits discrimination against its customers, employees, and applicants for employment on the bases of race, color, national origin, age, disability, sex, gender identity, religion, reprisal, and where applicable, political beliefs, marital status, familial or parental status, sexual orientation, or all or part of an individual's income is derived from any public assistance program, or protected genetic information in employment or in any program or activity conducted or funded by the Department. (Not all prohibited bases will apply to all programs and/or employment activities.)

If you wish to file a Civil Rights program complaint of discrimination, complete the USDA Program Discrimination Complaint Form, found online at [www.ascr.usda.gov/complaint\\_filing\\_cust.html](http://www.ascr.usda.gov/complaint_filing_cust.html), or at any USDA office, or call (866) 632-9992 to request the form. You may also write a letter containing all of the information requested in the form. Send your completed complaint form or letter to us by mail at U.S. Department of Agriculture, Director, Office of Adjudication, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410, by fax (202) 690-7442 or email at [program.intake@usda.gov](mailto:program.intake@usda.gov).

Individuals who are deaf, hard of hearing or have speech disabilities may contact USDA through the Federal Relay Service at (800) 877-8339; or (800) 845-6136 (Spanish).

For any other information dealing with Supplemental Nutrition Assistance Program (SNAP) issues, persons should either contact the USDA SNAP Hotline Number at (800) 221-5689, which is also in Spanish or call the Arizona Nutrition Network Hotline; in Maricopa County call 602-542-9935, outside of Maricopa County call 1-800-352-8401.
